#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki ('496) in view of Wason ('186).

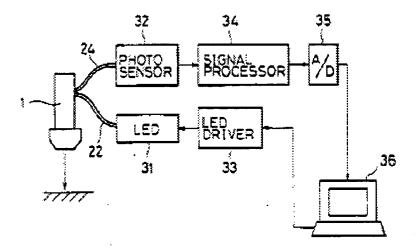

#### Claim 23

Yamazaki ('496) discloses a method for directing a laser beam perpendicularly to the machined surface (See Fig. 3); detecting a scattered laser beam light from the machined surface (Col. 6-7, lines 63-17); determining a signature of the detected scattered laser beam light (Col. 6, lines 45-60); and determining a condition of the machined surface from the signature (Col. 6, lines 45-60).

Application/Control Number: 10/603,051

Art Unit: 2877

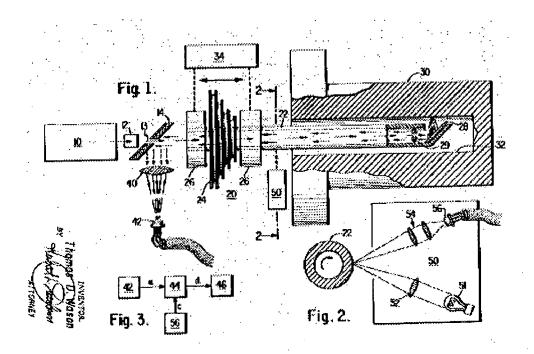

FIG. 3

Yamazaki ('496) substantially teaches the claimed invention except that it does not show a machined surface is a cylinder bore. Wason ('186) shows that it is known to provide a cylinder bore (Fig. 1, Ref. 30) for an inspecting the surface condition apparatus. It would have been obvious to combine the device of Yamazaki ('496) with the cylinder bore of Wason ('186) for the purpose of providing inspection of different types of machined surfaces, therefore increasing the usability of the apparatus in different environments.

Application/Control Number: 10/603,051

Art Unit: 2877

# Claim 24

Yamazaki ('496) further discloses determining a signature includes determining a characteristic peak of the detected scattered laser beam light (Col. 6-7, lines 63-17).

# Claim 25

Yamazaki ('496) further discloses determining a condition includes determining a type of machining mark (Figs 4a-4c).

#### Response to Arguments

3. Applicant's arguments with respect to claims 23-25 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/603,051 Page 5

Art Unit: 2877

### Allowable Subject Matter

4. Claim 26 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

- 5. Claims 2-21, 27-29, 32, 33 are allowed over the prior art of record.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 4, the prior art fails to disclose or make obvious an inspection probe for inspecting a surface finish of a machined surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the machined surface is a cylinder bore for an engine block, and in combination with the other recited limitations of claim 4. Claims 2, 3, 5-21 are allowed by the virtue of dependency on the allowed claim 4.

Regarding claim 27, the prior art fails to disclose or make obvious a reconfigurable inspection apparatus for inspecting the surface finish of a plurality of machined surfaces in a part having a reconfigurable multi-spindle apparatus having a plurality of spindles, a plurality of inspection probes rotatably and movably supported on corresponding spindles and a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, and in combination with the other recited limitations of claim 27. Claims 28, 29 are allowed by the virtue of dependency on the allowed claim 27.

Art Unit: 2877

Regarding claim 32, the prior art fails to disclose or make obvious an inspection probe for inspecting the surface finished of a manufactured surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the first and second finishing marks correspond to finishing marks before and after a removal of material, and in combination with the other recited limitations of claim 32.

Regarding claim 33, the prior art fails to disclose or make obvious an inspection probe for inspecting the surface finished of a manufactured surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the first and second finishing marks correspond to finishing marks before and after an addition of material, and in combination with the other recited limitations of claim 33.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael P. Stafira whose telephone number is 571-272-2430. The examiner can normally be reached on 4/10 Schedule Mon.-Thurs...

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Toatley can be reached on 571-272-2800 ext. 77. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
